RPC | Highly productive beam cutting line with automated edge rounding

- Edge Rounding Line automated edge treatment
- Automated material handling and high speed throughput
- ERL Edge rounding
- Intuitive machine operation
- Marking for easy traceability
- Accurate plasma cuts for ready-to-fit parts
- RPC Beam cutting

Edge Rounding Line
Fast and high quality edge rounding without grinding or milling.

Automated edge treatment
Optionally the RPC can be equipped with an Edge Rounding Line to prevent labour intensive grinding and milling ensuring an even and complete coating on the surface.

Approved rounding technique
The rolling method doesn’t interfere with the material standards. Lab research reports available on request.

Avoid rejected coatings
Easily meet the edge treatment requirements as described in NEN-EN-ISO 8501-3 (P2/P3). No risk of disapproval by the coating specialist in the critical phase of a project.

Practically eliminate grinding
HGG has developed unique cutting techniques to practically eliminate the need for finishing by grinding.

Beam Cutting Line
High speed plasma cutting of ready-to-fit parts prepared for any desired connection.

Fast material measurements
Accurate laser triangulation measurements of the surface enable adaptation of the theoretical 3D cutting paths to the deviations of the raw material.

High speed throughput
Continuous bolt hole cutting and interlinked cutting sequences enable a significantly shorter throughput time.
